Plaster dosing unit

Gone are the days when plaster mixtures were produced by hand on the basis of estimates in orthopaedic specialist workshops.

With the 701Z150 plaster dosing unit, we have developed innovative technology that permits precise and cost-saving dosing of plaster and water on the basis of three pre-programmed mixing ratios. User-friendly and equipped with a multilingual display, the unit not only allows the precisely determined quantity of plaster and water to be mixed but also reduces the development of rising plaster dust.

The plaster dosing unit at a glance:

- Consistently high plaster quality
- Saves time for your company
- No material waste due to incorrect dosing
- 4-language touchscreen display
- Dimensions W x D x H
750 mm x 1,655 mm x 1,270 mm
- Electrical connection in V/Hz/kW:
3 x 400/50–60/0.3
